Elephants are Endangered Animals. There are two kinds of elephants, the African elephant and the Asian elephant. Both are endangered. There are believed to be around five-hundred-thousand African elephants in the wild. This may sound like a lot, but only twenty-five years ago, there were more than one million. The numbers are decreasing very quickly. That means in twenty-five years, half the elephants that lived, have died. Asian elephants are even more endangered than African elephants. It is believed that there are less than 50,000 alive. This is only a tenth of the number of African elephants, due to the decreasing habitat and poachers.
